

Rayane Bouzeriba – Clinical Data Science Portfolio

■ About Me

I'm a clinical data science student with a dual background in biomedical science and computer science. My work combines technical precision with clinical relevance: I build tools and analyses that make complex biomedical data more accessible and useful. I'm passionate about using data to improve treatments, contribute to cures, and support evidence-based decisions in healthcare.

■ Skills

Technical

- 1 Python (pandas, matplotlib, Streamlit)
- 2 SQL, Java, Excel, Tableau
- 3 Data cleaning and manipulation
- 4 Dashboard development
- 5 Git & version control

Domain Knowledge

- 1 Clinical trial structures (treatment vs placebo)
- 2 Biomedical research principles
- 3 Data ethics and patient privacy
- 4 Bilingual communication (English, French, Arabic)

■ Projects

■ *Clinical Trial Dashboard*

Built an interactive dashboard using Python and Streamlit to analyze clinical trial data comparing treatment vs placebo groups. Visualized response rates and side effects using pandas and matplotlib. Demonstrates ability to clean, analyze, and present biomedical data in an interactive format.

■ Education

- 1 Honours B.Sc., Biomedical Science – University of Ottawa (2020–2024)
- 2 Honours B.Sc., Computer Science – University of Ottawa (in progress, expected 2028)

■ Professional Interests

I'm seeking opportunities in clinical research, health tech, and data analysis. I'm especially interested in working with clinical trial data, building dashboards for research teams, and supporting data-driven healthcare decisions.
